

## Accommodation in the Silichy skiing resort

### GUEST HOUSES

Houses for individual residing are designed 2-storeyed.

Ground floor - a public zone (living-room). It represents a big room with a fireplace, a compact kitchen and a bath with a shower.

First floor is designed as a sleeping place. The lay-out of bedrooms in eight small guest houses is designed differently. There the rooms on the 1-st floor are represented as open mezzanines - the uniform big space incorporated by a ladder and without partitions. And in the other - the top levels will be broken into two bedrooms.

### HOTEL

The hotel was designed in an interesting constructive way which will allow to use it to easily access every place in the resort. The question is realization in the hotel of two-level numbers. In the project besides the basic, sleeping part located on the top floor, there are public zones where it is possible to keep skis, other inventory. But it is not all. In each room an individual exit is providing direct access to mountain-skiing courses, i.e. it is possible to get out of the room, omitting the main hotel entrance and public corridors. In designers' opinion, such a lay-out of rooms will be maximum convenient and adapted to needs of the visitors.

Besides the 2-leveled hotel rooms there are also traditional rooms: in the top, 3-rd floor of hotel mansard rooms, in the ground-floor the standard lay-out was used, the rooms are facing the forest.
